

DALI Alliance reaches double milestone of 3,000 DALI-2 products and 350 members

Piscataway, NJ, USA – February 28, 2023: The [DALI Alliance](#) has reached two important new milestones that demonstrate broad global support for the organization and its certification programs. The number of certified DALI-2 products now exceeds 3,000 devices, and at the same time DALI Alliance’s membership has grown to 350 members.

DALI-2 certification requires the product to successfully pass a rigorous and comprehensive set of tests based on the international standard IEC 62386. The DALI Alliance independently verifies the test results, and then lists each certified product in its online [product database](#), providing public traceability. The database contains all certified DALI-2 and D4i components.

The 3,000th DALI-2 product is the [EUM-150S150ET LED driver](#) from Inventronics. This product includes luminaire, energy and diagnostics data ([Parts 251-3](#)), which means that it can store luminaire information (typically encoded by the luminaire manufacturer) in one of the driver's DALI memory banks, and can report operational diagnostic and energy usage data.

The 350th member is Leap Info Systems Pvt. Ltd., a lighting controls and automation technology company based in Pune, India, which has joined as an Associate member (view the full [member list](#)). Associate membership enables companies to participate in the DALI-2 certification program, and to use the DALI trademarks. Currently, the alliance has 35 Regular members, 268 Associate members and 51 Community members.

“We are grateful to all our members who support our certification programs, and we’re excited to continue driving standardization across the lighting industry,” said Paul Drosihn, General Manager of the DALI Alliance. “Our online database now contains a huge range of certified DALI-2 and D4i products, including LED drivers, sensors, application controllers and bus power supplies.”

Regular and Associate members of the DALI Alliance are all able to certify their DALI-2 and D4i products. In addition, Regular members can participate in Work Groups and contribute to the development of test sequences and new specifications (view the list of [benefits of different membership classes](#)).

Regular members are also eligible to sit on the DALI Alliance Board of Directors, which was recently expanded to include 9 member companies, reflecting the growing membership. The new Board was elected at the DALI Alliance virtual General Assembly meeting on 27th February. Existing Board members representing Helvar, Loytec, Lutron, Osram, Signify, Tridonic and Trilux have been joined by new members from LEDVANCE and Synapse Wireless (see [full Board list](#) on our website).

About the DALI Alliance

The DALI Alliance (also known as the Digital Illumination Interface Alliance or DiiA) is an open, global consortium of lighting companies that drives the growth of lighting-control solutions based on internationally standardized Digital Addressable Lighting Interface (DALI) technology. The organization operates the DALI-2 and D4i certification programs to boost levels of cross-vendor interoperability. As lighting continues to evolve and converge with the IoT, the DALI Alliance is also driving the standardization of wireless and IP-based connectivity solutions.
